WPC DECKING & WALL CLADDING & PERGOLA & FENCING

WALKING OUT OF BUILDINGS
GETTING CLOSE TO NATURE

From a cramped balcony to a spacious terrace, from an apartment to a villa with a garden, stepping into nature and embracing a larger outdoor living space has become an enhanced pursuit for those who truly appreciate life.

LIVE WITH NATURE

TARGET SPECIALTIES

What kind of outdoor living space do you want?

Do you desire tranquility in the busy city? Or a clean and sparkling private swimming pool? Or an outdoor barbecue party in the open-air garden with neighbors and friends?

An outdoor living space can serve as a peaceful green oasis in the heart of the city, a leisure and entertainment hub for the entire family, or a gathering spot for friends to chat and dine. It is designed entirely based on your needs. Remember, an effective outdoor space is a place to enjoy life and relax yourself!

Are there enough external power interfaces reserved in or near the decking area in the outdoor space?

To lay out your outdoor living space

Want a shade frame? Where can you get the most comfortable sunshine in your yard when the sun rises and set ?

Want to make delicious foods in the courtyard with friends? this requires the deck anti-skid, anti oil and pollution.

Total cost of ownership (TCO) of your deck

LIVE WITH NATURE

TARGET SPECIALTIES

It seems that a traditional wooden deck only requires materials and construction costs at the outset. However, after a certain service time, it needs a coat of stain and sealant every couple of years. Real wood is also susceptible to wood rot, mildew, and mold, which can be difficult, time-consuming, and costly to repair. Therefore, it actually requires regular and costly maintenance over the years.

It is important to calculate the total cost of ownership (TCO) for the lifetime of any deck you plan to install.

LIVE WITH NATURE

TARGET SPECIALTIES WPC Vs WOOD

Target Specialties SUR composite decking is durable, attractive, low-maintenance, easy to install, and easy to enjoy. Whether it's an intimate balcony space overlooking the cityscape or a large deck surrounding a backyard pool oasis, it allows you to calculate the total cost of ownership of your deck and get the best return on your investment in your home.

TS®PRE

Non Capped, known as First Generation

TS®INCRE

Capped Halfway

TS®SUR

Capped 360 Degrees

TARGET SPECIALTIES PRE

The main raw materials used are wood powder and PE plastic. It is a non-capped product and is known as the first generation of composite products that can replace real wood and anti-corrosion wood for outdoor flooring profiles

TARGET SPECIALTIES INCRE

Semi coated. The inner core is same with PRE material. the coated part is a polymer composite protective layer, which can block UV, wear and corrosion resistance. This technology is mostly applied to irregular profiles such as wallboard.

TARGET SPECIALTIES SUR

It is 360 degrees capped, and polymer composites are used on the surface, which not only retains the advantages of INCRE, but also solves the problems of different expansion and water absorption of the inner core, resulting in a stronger and more stable performance.

TARGET SPECIALTIES & SUR

- Stronger
- UV inhibition- sun resistance- color durability
- Anti-oxidants- longer life durability
- Mold inhibition- bacteria resistance
- Low maintenance- stain resistance
- More color and surface option

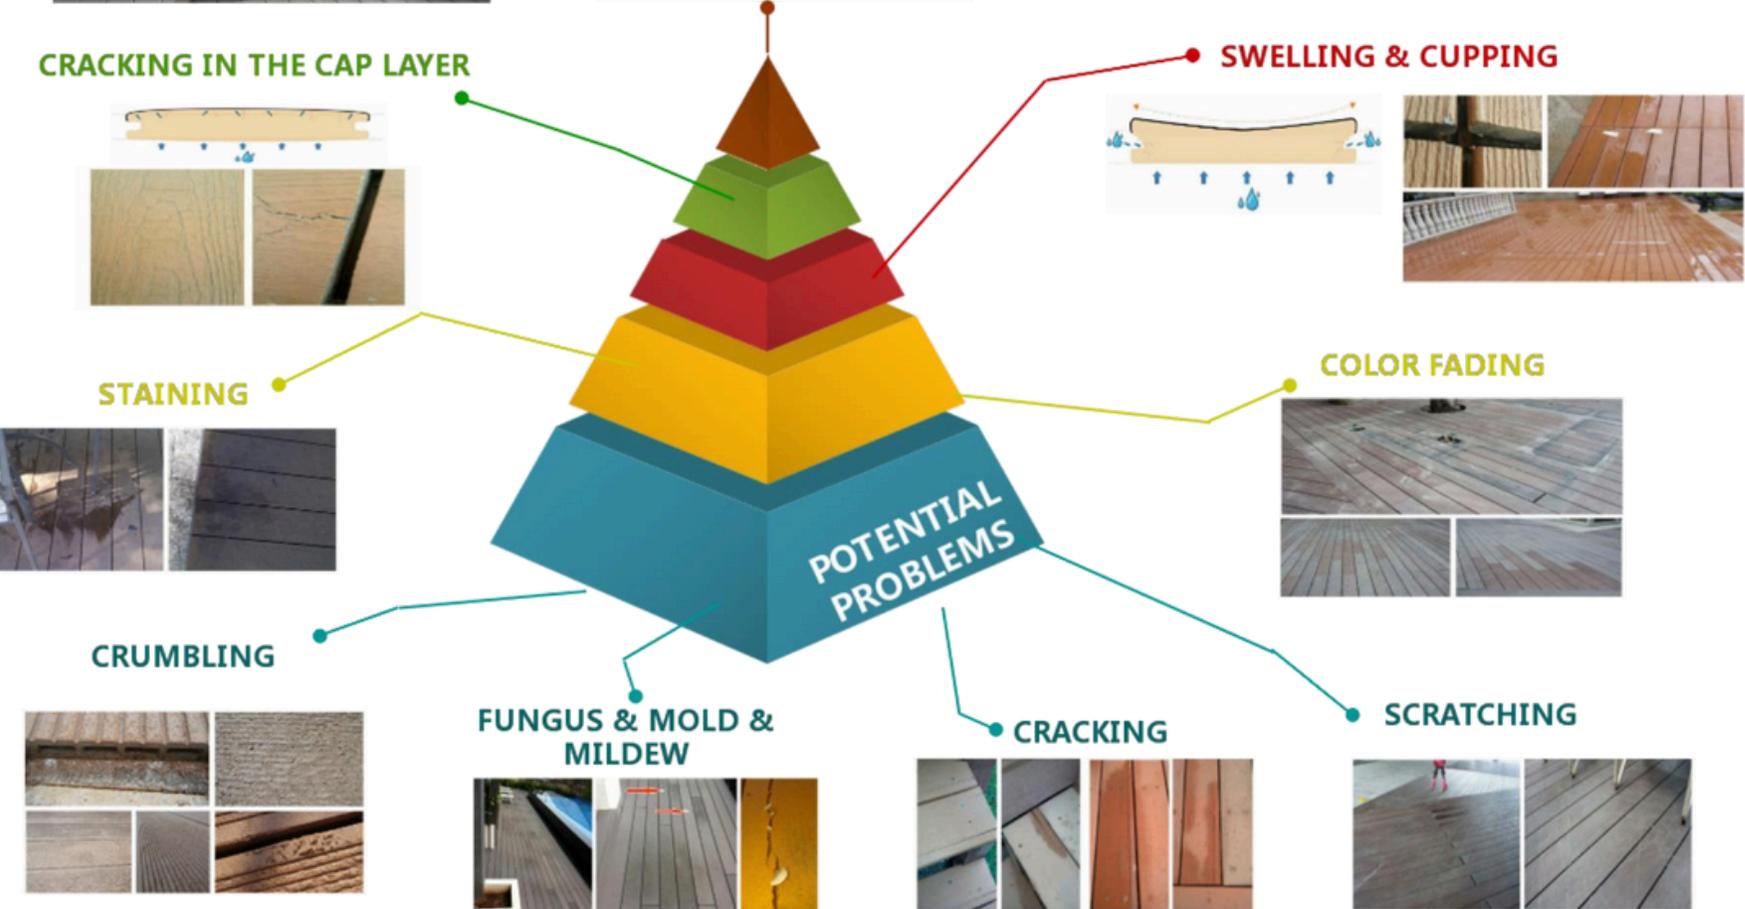

Target Specialties® SUR is a two-layered wood plastic composite decking. Through the use of a special co-extrusion process, the two layers are tightly bonded together, providing strong protection to the core and the decking board as a whole.

BEST SOLUTION

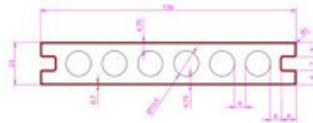

TARGET SPECIALTIES SUR, capped 360 degrees, provides complete protection all around the board and even in the groove of the board. High resistance to damage and rot makes it the best solution to potential problems in some competitors' WPC products.

TARGET SPECIALTIES & PRE

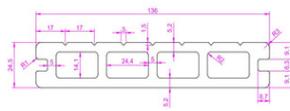

- Fade resistance
- Insect resistance
- Mold inhibition
- Low maintenance
- Colorful

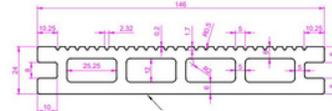

Target Specialties PRE series is the first generation of WPC products made through an extrusion process using wood powder, PE plastic, and additives as raw materials. It offers a wide range of colors. With its high-quality characteristics such as waterproofing, low expansion rate, corrosion resistance, and resistance to moth damage, it is commonly used as an outdoor landscape product in place of real wood and anti-corrosion wood.

Installation & Instruction

- Preparation: Ensure that the substructure is level, stable, and free from any debris or obstacles. Decide on the direction and pattern of the decking boards before starting the installation process.
- Fixing the joists: Fix the joists onto the substructure with appropriate screws or bolts, ensuring that they are level and spaced correctly.
- Installing the clips: Install the clips onto the joists, ensuring that they are aligned with the edge of the joists and spaced at a maximum of 40 cm (16 inches) apart.
- Installing the decking boards: Starting from one end of the decking, place the first board onto the clips, ensuring that it is aligned and level. Then, fix the board onto the clips with screws, making sure that they are flush with the surface of the board. Repeat this process for each subsequent board, ensuring that there is a gap of 6-8 mm (0.24-0.31 inches) between each board for ventilation and expansion.
- Finishing: Once all the decking boards have been installed, cut and install skirting boards around the perimeter of the decking to cover up the gaps between the boards and the ground.

TARGET SPECIALTIES® WPC

Target Specialties was established in 2020, with its headquarters located in Cardiff UK. With an independent high-tech manufacturing facility and a dedicated sales service company.

Target Specialties has emerged as a leading player in the WPC Industry. Target Specialties is engaged in the production, research and development, sales, and exploration of potential market demands for WPC materials.

Target Specialties materials comply with international standard, and are certified by recognized global authorities. Products have been tested by in-house testing laboratory according to ASTM and EU CE standards. Additionally, all the produced material is going through strict QA QC inspection conducted by the factory. Target Specialties main product range includes but is not limited to outdoor WPC decking floors, outdoor WPC wall cladding, fencing, pergolas, WPC tiles, park benches / chairs, flower boxes, and other decorative & specialized building materials used in indoor & outdoor applications.

Furthermore, Target Specialties is also capable of customized production to meet individual customer demands. For detail range of our products you can visit our website [targetspecialties.com](https://www.targetspecialties.com).
